Remarks; Charles H. Dailey - Commenced with a succession of colds, finally terminating in decided Pneumonia; Charity E. Cox - Scrof. Death and more or less unwell for 8 years; Amanda Philleo - same as for C. H. Dailey; Maria Wright - By tipping over a pail of hot water.

It will be seen from the foregoing pages that the mortality within the limits of Rock Island Co. for the year ending June 1, 1860, has been quite small. Such has also been the case for the two immediately preceding years. Measles and Scarlet Fever are the only two diseases which have appeared in epidemic form, and they of such mild type as to be rather endemic than epidemic. Physicians inform me that in most instances the type of fever was Scarletina Simplex, while rarely an instance occurred of severe type than anginose.

An extent of Miss. River border for 70 miles upon one side, and that the northern and western boundary, also a low broad Slough (known as the Meredosia) connecting the Miss. & Rock River and forming the eastern boundary of the North half of the county, as well as the passage of Rock River with its bottoms through the center, and a very considerable amt. of lowland at the west end render the county as liable according to its size as any in the State to the prevalence of Miasmatic disease, arising from such sources; yet the experience of several years past indicates a decided decrease of that type of disease in our midst, or an unusual exemption from local causes.

Pneumonia prevails to some extent both Spring & Fall but nothing is known other than what I have just mentioned to superinduce its existence and prevalence. Within two years past Diphtheria has not been unknown, but has generally proved tractable and readily managed. As far as my inquiries enabled me to do it, Consumption is placed under one of two heads, Phthisis Pulmonalis and Phthisis Tuberculosis - Subject, however, to this explanation, that the distinction intended is Phthisis Tuberculosis is used when the person was evidently of Scrofulous diathesis or hereditary constitutional tendency to tubercular disease, - and Phthisis Pulmonalis, when the disease seemed to approach through the medium of the throat and Bronchi and progressed to complication of the entire cellular tissue of the lungs, yet with a progress more dilatory and with less acute inflammation apparently than in Pneumonia or diseases germane to it. A Characteristic of this region of country it is stated by our Physicians that no instances of Tubercular Consumption was ever known to occur among persons born here having no hereditary or constitutional tendency to it - and further, that people apparently predisposed to pulmonary disease previous to removal here from East of the Alleghenies, are afterwards much less subject to such difficulties, and are in some instances seemingly relieved entirely from former predisposition.

The climate in this locality for some years past has been rather dry than otherwise most of the time - at least, there has been no long prevailing seasons of fog, and air surcharged with moisture. The water is universally lime water, the proportion of lime being quite considerable, but the Specific amt. I am unable to state. The soil of the Bottoms (both Miss. & Rock River) is recent and rich alluvial deposit. The higher and Prairie ground rearward is the usual clay prairie soil. It is noticeable, however, that the Prairie soil north of Rock River, and between the Meredosia and the Miss. River especially is more mixed with sand than the portion of the County lying south of it.

Very little timber exists except along the Miss. River Bluffs, and much the finer and larger growth of this is found in the western half of the County. Its location and growth, generally, are such, it is presumed that the timber section has but little if any effect upon the general health of the inhabitants.

Remarks: Matilda Johnson - Was about the house as usual when she suddenly complained of feeling unwell, and reaching a seat expired almost instantly; M. McCormick - Came down the Miss. on a raft, and was without med attendance, apparently not seriously ill till the night he died. It is to be observed in the foregoing pages the "number of days ill" in all cases of Phthisis, are given as nearly as may be from the time the individual gave up business or labor. A disease of such deceitful appearance and insidious nature cannot possible be timed with certainty.

City & County of Rock Island, State of Illinois

N. M. Blanding, Asst. Marshal, being duly sworn according to law, deposes and says, that the census statistics contained in the foregoing pages of Schedule No. 3 are in accordance with his oath and instructions to the best of his knowledge and belief, all errors of entry, ?), and omission, excepted. N. M. Blanding, Asst. Marshall

Sworn to and subscribed before me this 26th day of September Anno Domini 1860.
